

TEAM MEMBER NAMES AND ROLES.

TEAM 5

TEAM MEMBERS:

ALBERT NII OKAI QUAYE ACROMOND

KOFI ASANTE GYAMEBI

KINGSLEY WUNZOOYA NAHYI

GERARD LEDOUX MENDJEMO NGANGOM

WILLIEWISE OPPONG

(COHORT C, CS213)

OBJECT-ORIENTED PROGRAMMING

FACULTY: DR. DANIEL ADDO

Name(s)	Roles	Team Score
Gerard Ledoux Mendjemo Ngangom	- Implement Phyphox Client and related classes to read light sensor values. - Code the Illuminance (lux) to Irradiance (W/m²) conversion logic based on Di Laccio's (2019) linear model. - Implement the Rooftop class (Area, Orientation).	9.33
WillieWise Oppong		9
Kingsley Wunzooya Nahyi	- Design the SolarPanel abstract class and subclasses (Monocrystalline vs. Polycrystalline) for polymorphism. - Implement mathematical logic to calculate total potential energy based on panel efficiency and rooftop effective area.	9
Albert Nii Okai Quaye Acromond		9
Kofi Asante Gyamebi	- Build the Appliance database (Collection/List of objects). - Implement the filtering logic to match	5.7

	available energy to specific devices. • Design and format the final user feasibility report string.
